### Använda delar:

Drivmatta 383x40,6cm, 51mm kamhöjd  
Förlängning 04-3000 kort variant, 160mm vändhjul  
Bandtunnelförlängning 04-3001  
Plastskidor Vuotsalainen 23cm

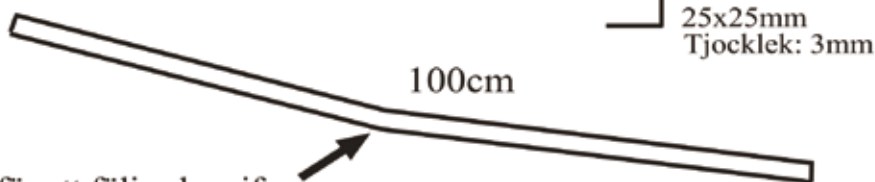

### Förstärkningen av bandtunneln

Aluminiumplåten bockas till denna profil (ungefärliga mått):

### Aluminiumprofil

25x25mm  
Tjocklek: 3mm

### Kort beskrivning:

Lastbågarna är flyttade 9 cm bakåt, lyftbågen/draghållaren är flyttad c:a 15 cm, vilket visade sig bli något för lite. Det blev trångt för händerna när man ska lyfta. Förstärkningarnas längd är vald för att nå till och förbi bakre boggieinfästning. Plåt och profil popnitas fast, plus att skruvar från lyftbåge och lasthållare hjälper till.

En tunn gummitatta har lagts på bakersta delen av bandtunneln för att snygga till. Tvåsitsdynan går att montera precis som i originalutförandet.

Förlängningar, se bildgalleri, som uppdateras ofta.

## Instruktioner

När du har monterat i en ny variator eller reparerat den gamla, kolla alltid fjädern i sekundärvariatorn. Väldigt ofta är den för svag och fungerar inte som den ska. Den växlar för tidigt och motorn orkar inte. Därför lönar det sig att spänna den gamla fjädern eller montera dit en ny. Du kan också prova att rengöra delarna.

## Linjering

Kolla med ett 12 mm tjockt järn eller en list för linjering av variatorerna. Om det inte finns någon stoppare eller begränsare i din skoter, som kan hindra motorn att vrida sig under drift, så måste måttet **Y** vara ca. 1,0-1,5 mm större än måttet **X**. Notera också att ny CV Tech, IBC är mindre i diameter och därför är manualens mått **Z** ej densamma.
